Evaluator Name: Louis Mollick

Severity scale:
Not Severe   1 2 3 4 5   Severe

Issue: Need to press Done Task button to continue after creating a loop/marker

Severity: 4

Heuristics Violated: Consistency and standards

Description: Using the "Done Task" button is only necessary before creating a second loop/marker. This is inconsistent with the first loop/marker creation, which just allows you to immediately press "Create Loop" or "Create Marker".

Issue: No option to change the song

Severity: 5

Heuristics Violated: User control and freedom

Description: After I click "Go" with a entered song URL, there is no option to return back to the start page & re-enter a different song.

Issue: No indication of what song is contained in a URL

Severity: 3

Heuristics Violated: Visibility of system status & Error prevention

Description: When I paste a URL into the text box in the introduction page, there is no feedback to show how the URL was registered by the system. What if I pasted the wrong URL? I won't know that I have until I press "Go" and play the wrong song.

Issue: Missing shortcut to go Forward/Backward by an increment

Severity: 1 (not in heuristics of concern)

Heuristics Violated: Flexibility and efficiency of use

Description: This shortcut would be very useful, and would prevent the user from having to turn back to their computer monitor & use their mouse to change the increment manually if they only want to rewind by an increased increment amount once.

Issue: Missing voice command to change increment

Severity: 1 (not in heuristics of concern)

Heuristics Violated: Flexibility and efficiency of use

Description: Ideally all commands should be possible through voice commands.
